Professional Profile

Junior **front-end web developer** with experience with **HTML, CSS and JavaScript**. Diploma qualified in **Information Technology**.

Intern at J3D.AI where I learned how to use **Webflow** to contribute to the current website and develop new pages for the website.

During my front-end developer bootcamp, I undertook both individual and collaborative projects encompassing a range of complexities.

Some skills that I learned are HTML, CSS, JavaScript, jQuery, APIs,, Bootstrap, and React. Additionally, I ensure systematic commits and pushes to GitHub. Moreover, I utilized Netlify for project deployment.

My motivation and aptitude for rapid learning enable me to adeptly acclimate to diverse work environments.

Programming Skills

- | | |
|---------------------|------------------|
| • HTML | • React |
| • CSS | • Webflow |
| • JavaScript | • GitHub |
| • Woordpress | • jQuery |
| • Bootstrap | • APIs |

Web Development Projects

- Co-created an e-commerce website to sell make-up products. The technologies used were **React, HTML, CSS, JavaScript, React Bootstrap, hooks and React Icons**. My responsibilities included creating the website's wireframe using **Figma**, designing the navbar and logo, fetching the data from an **API** of make-up products and integrating it into the products page. The website was deployed using Netlify.
Link to the website: <https://ecom-react-app-makeup-junkie.netlify.app/>
- Co-created City Guide website to facilitate users in searching for any city and retrieving a comprehensive summary, including current weather, currency information, and public holidays. My responsibilities were calling the currency exchange API using **Ajax** to display the currency based on user input as well as implementing the functionality to store the latest search cities in local storage. Successfully delivered the project within the designated timeframe, meeting the deadline requirements.
- Some projects created independently are a README generator using node, a team profile generator using node and JavaScript, weather forecast with local storage and API.

Career summary

J3D.AI (Front-End Developer Intern), Remote

November 2023 - February 2024

Projects Worked on:

- **To-Do List Ideation and Creation** - Brainstorming, designing, and developing a user-friendly and visually appealing list in **Google Sheets**, to be used later by the marketing team.
- **Landing Page Optimization** - Conducting A/B testing and implementing data-driven changes to improve the conversion rate of a website's landing page using **Webflow**.
- **Single Page Development** - Develop two new pages while keeping the feel of the current website using **Webflow**. After the pages were live, update the pages to add more content depending on the needs.

edX Bootcamp in Front-End Web Development, Remote
